A liquid formulation contains a thickener and 0.05-10% buffer, and has a viscosity at 20 deg. C of 5-50 cps.

Preferably the buffer consists of a boric acid-based buffer, or phosphoric acid-based buffer. Preferably the thickener is polyvinyl pyrrolidone, polyvinyl alcohol, hydroxyethyl cellulose, hydroxypropyl methyl cellulose, or polyethylene glycol. The formulation is filled in a container made of plastics, including polyethylene, polypropylene, polyethylene terephthalate, or polycarbonate.

USE - The formulation is suitable for use in rubbing and washing a contact lens.

ADVANTAGE - The formulation has high safety, a high cleaning effect, high viscosity stability, and efficiently washes the contact lens. Filling the formulation in a container made of plastics yields higher viscosity stability.

Dwg.0/3

L11 ANSWER 5 OF 8 WPIDS (C) 2002 THOMSON DERWENT

ACCESSION NUMBER: 1998-305165 [27] WPIDS

DOC. NO. NON-CPI: N1998-239686

DOC. NO. CPI: C1998-094459

TITLE: Safe liq. agent for contact lenses, having high disinfecting power - contains poly hexa methylene biguanide and a nonionic isotonicity agent.

DERWENT CLASS: A96 D22 E16 P34 P81
